

Masimo Emma Capnograph

The Emma CO₂ monitor provides immediate capnography. With virtually no warm-up time and full accuracy in 15 seconds, the Emma Capnograph measures EtCO₂ and respiration rate.

- Small, portable, and lightweight, the Emma unit includes its own case and airway adapter.
- Added mobility for monitoring adult, pediatric and infant patients.
- Flexible enough to be used for various points of care including pre-hospital, emergency medicine, operating room, intensive care unit and long-term acute care.
- Helps assess the effectiveness of CPR.
- Rugged water-resistant design for reliable operation in challenging environments.
