

Philips M2636C Telemon

The M2636C TeleMon Monitor will work with the M2601A, M2601B, or M4841A Transmitter

The M2636C TeleMon monitor interfaces with the telemetry transmitter to display two ECG waveforms, non-invasive blood pressure values and % SpO₂ to the Information Center.

NIBP, recording, suspend requests, and the TeleMon Inops are transmitted through a unidirectional, RF telemetry link from the Telemon through the transmitter, to the Information center.
